

Using learning outcomes to make student workload more visible

Siara Isaac, Cécile Hardebolle & Ingrid Le Duc
Teaching Advisors, EPFL

siara.isaac@epfl.ch

cecile.hardebolle@epfl.ch

ingrid.leduc@epfl.ch

Welcome!

At the end of this workshop you should be able to:

- Explain to your colleagues how **student workload (SW)** and **learning outcomes (LO)** are related
- Decide if an **interface for LO**, similar to the one of EPFL, is adaptable to your circumstances

Introduction

Tell us:

- Who are you?
- What are your concerns about 'student workload'?

Learning Outcomes

A clear, concise statement of what a student must be able to do at the end of the instruction period.

Poor example

- Understand the concept of conflict of interest and its relevance to pharmacists.

Better examples

- Provide examples of conflict of interest pertinent to pharmacists.
- Identify specific situations where a conflict of interest exists.

Activity 1: The main question

1. Individually, write down your answer to the following question (1 min)

**How are learning outcomes
and student workload related?**

2. Share your answer with the person sitting beside you (4 min)
3. Plenum: agreements, disagreements, questions left open (5 min)

L.O. + S.W.

- ECTS allocation.
- Mark the differences between content transmission and content application.
- Greater coherence with programme outcomes.
- Trace transversal skills across a programme.

EPFL Course Description Project (2013)

Goals of the project

- **All courses** to be described in terms of learning outcomes by Spring 2014
- Learning outcomes to provide **useful** information to students, teachers, programme managers and the wider public

Challenges

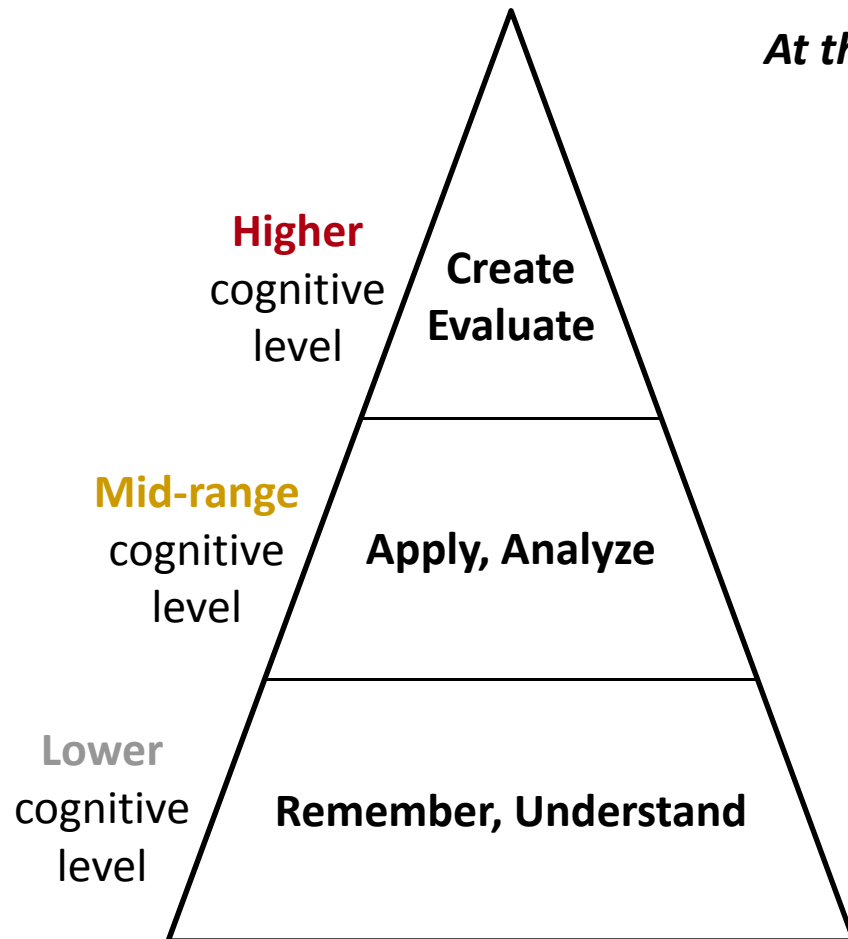

- Writing of Learning Outcomes in the **right format** (observable, action verbs, etc.)
- Obtaining an **overview of the cognitive difficulty** of courses across the curriculum
- Ensuring a **coherent and non abusive** inclusion of **professional / transversal competences**
- Improving the **alignment** of student workload – learning outcomes – instructional strategies

Implementation

- Development of a web-based Course Description **interface** ('fiche de cours') with multilingual support
- Launched in May 2013, **deadline** November 2013

Subject competences

- Simplified cognitive levels
- Fixed set of observable verbs for each level
- Freely defined context

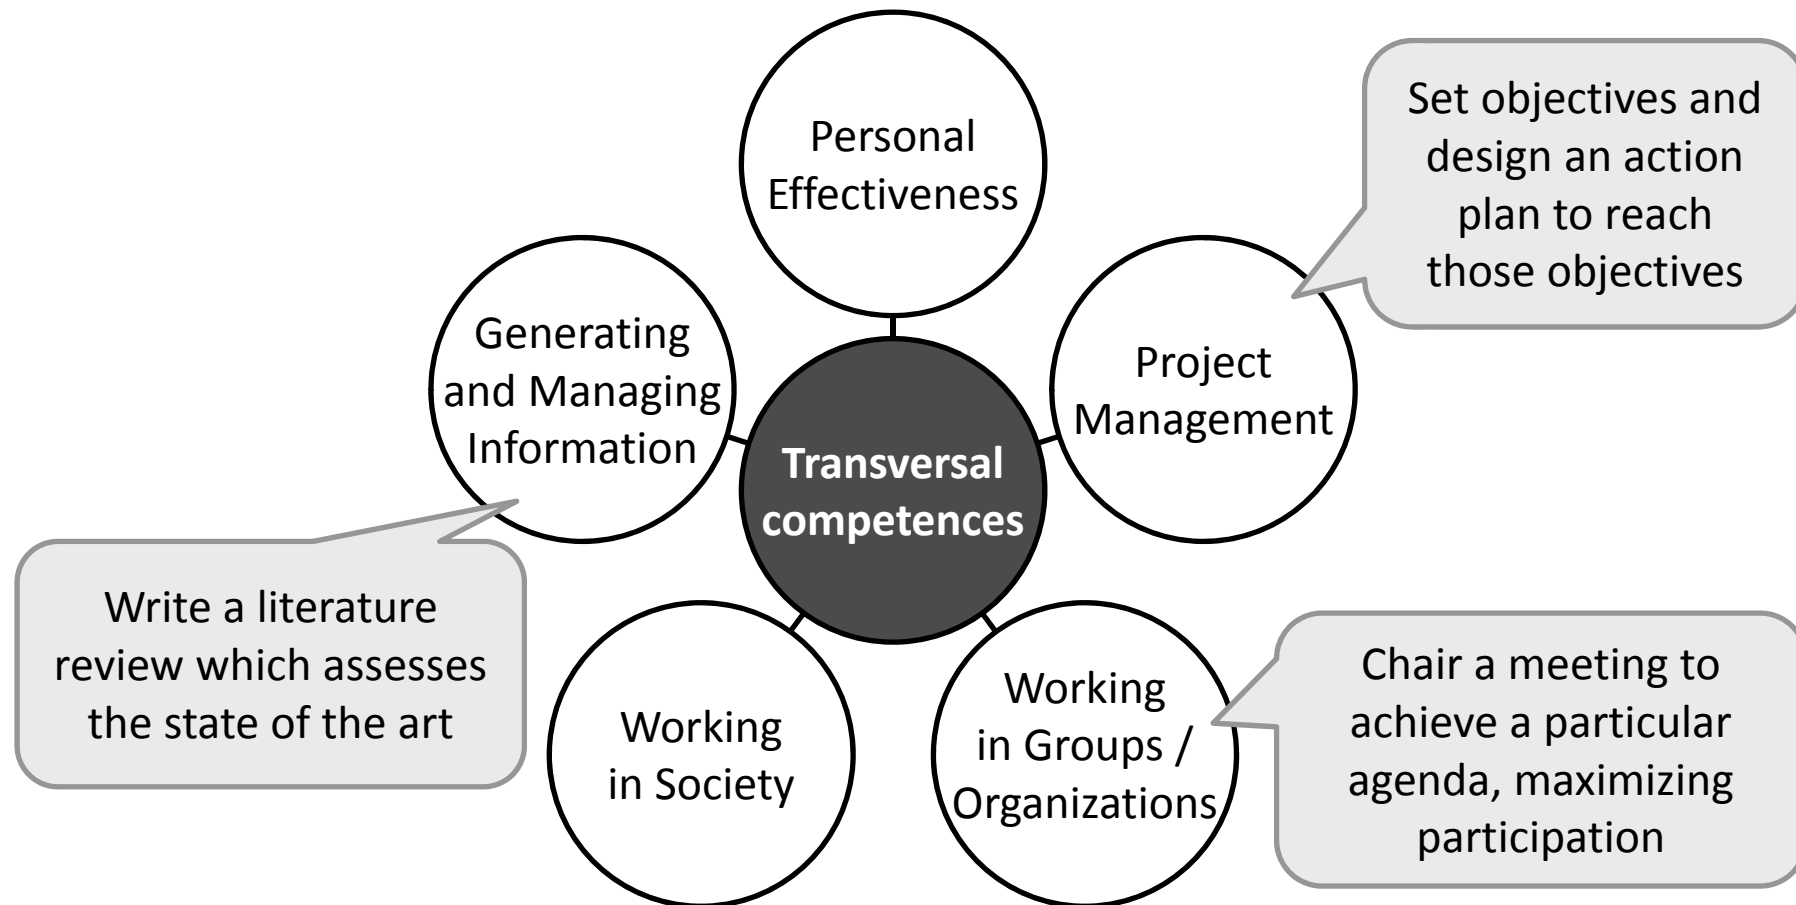

At the end of the course the students must be able to:

- ***Design*** mechatronic systems (choice of sensors, actuators, embedded systems)
- ***Evaluate*** the performance of a closed loop system, drawing on simulation or experimental data, and draw conclusions
- ***Compare*** the performance of JFET and Bipolar Transistors
- ***Model*** the internal logistics of a production and distribution system
- ***Define*** the concept of thermodynamic efficiency
- ***List*** and explain the hygiene and safety rules applicable to biomechanical testing of tissues

Transversal competences

- Pre-entered set of skills
- 5 categories of professional & personal competences

At the end of the course the students must be able to:

Interface for creating learning outcomes

Study plan

Génie civil 2013-14

Sciences et ingénierie de l'environnement 2013-14

SUMMARY

The student will learn how to solve numerical problems and understand the theoretical properties of these methods in...

CONTENT

- Stability, condition number and convergence of numerical methods
- Polynomial interpolation and least squares approximation
- Numerical integration
- Direct methods for the solution of linear systems
- Iterative methods for the solution of linear and nonlinear systems
- Iterative methods for the solution of eigenvalue problems
- Numerical approximation of ordinary differential equations
- Finite difference approximation of 2-point boundary value problems
- Introduction to MATLAB/OCTAVE

Keywords

numerical algorithms, linear systems, differential equations, Matlab

LEARNING PREREQUISITES

Required courses

Analysis, Linear Algebra

Recommended courses

Programming

LEARNING OUTCOMES

By the end of the course, the student will be able to:

- Choose a method for solving a specific problem.
- Assess / Evaluate numerical errors.
- Interpret results of a computation.
- Prove theoretical properties of numerical methods.
- Implement numerical algorithms.
- Describe methods for solving computational problems.
- Apply numerical algorithms to specific problems.
- State theoretical properties of mathematical problems and numerical methods.

Transversal skills

- Use a work methodology appropriate to the task.
- Use both general and domain specific IT resources and tools
- Access and evaluate appropriate sources of information.

TEACHING METHODS

Ex cathedra lecture, exercises in the classroom and with computer

Observable verbs with cognitive level visible and tagged

List of verbs with cognitive level

Higher

Advise, Argue, Assess / Evaluate, Choose [an appropriate method], Compose, Construct, Contextualise, Coordinate, Create, Critique, Decide, Defend, Design, Develop [a rule, model or system], Elaborate, Estimate, Expound, Formalize, Formulate, Generalize, Hypothesize, Infer, Integrate, Interpret, Judge, Justify, Message, Negotiate, Optimize, Plan, Produce, Promote, Propose, Prove, Sketch, Specify [a role, a function], Structure, Synthesize, Systematize, Theorize, Transpose

Mid-range

Analyze, Anticipate, Apply, Assemble, Carry out, Categorize, Characterize, Check [against criteria], Compare, Compute, Conduct [a study, an experiment], Contrast, Deduce, Demonstrate, Derive, Detect, Differentiate, Dimension, Discriminate, Distinguish, Examine, Exploit, Explore, Implement, Investigate, Make, Manipulate, Model, Modify, Operate, Organize, Perform, Predict, Quantify, Realize, Reason, Report, Search, Solve, Take into consideration, Test, Transcribe, Translate, Use, Verify, Visualize, Work out / Determine

Lower

Arrange, Classify, Complete, Define, Describe, Discuss, Draw, Establish, Explain, Express, Give an example, Identify, Illustrate, Label, Link, List, Match, Order, Present, Quote, Recall, Recognize, Reconstruct, Represent, Respond, Restate, Select appropriately, State

List of transversal skills

Project management

Assess progress against the plan, and adapt the plan as appropriate.
Plan and carry out activities in a way which makes optimal use of available time and other resources.
Set objectives and design an action plan to reach those objectives.
Use a work methodology appropriate to the task.

Working in groups and organisations

Chair a meeting to achieve a particular agenda, maximising participation.
Communicate effectively with professionals from other disciplines.
Communicate effectively, being understood, including across different languages and cultures.
Evaluate one's own performance in the team, receive and respond appropriately to feedback.
Give feedback (critique) in an appropriate fashion.
Identify the different roles that are involved in well-functioning teams and assume different roles, including leadership roles.
Keep appropriate documentation for group meetings.
Negotiate effectively within the group.
Resolve conflicts in ways that are productive for the task and the people concerned.

Working in society

Respect relevant legal guidelines and ethical codes for the profession.
Respect the rules of the institution in which you are working.

Creates a database of learning outcomes

Pre-entered transversal skills

Demo: subject competences (1')

The screenshot displays the IS-Academia website interface. The main content area is titled 'Course Book' and shows details for the course 'HUM-432(a) How people learn I' and 'HUM-432(b) How people learn II'. The course description includes sections for Keywords, Learning Requisites, Learning Outcomes, Transversal skills, Teaching Methods, Expected Student Activities, Assessment Methods, Supervision, and Resources. A sidebar on the right contains a 'List of verbs with cognitive level' and a 'List of transversal skills'.

Keywords
Learning, Education, Social and Human Research, Interdisciplinary Studies

LEARNING REQUISITES

- Required courses (obligatory)
- Required courses (recommended)
- Important concepts to start the course

LEARNING OUTCOMES

Transversal skills

TEACHING METHODS
First semester: lecture course-seminar;
Second semester: research project.

EXPECTED STUDENT ACTIVITIES

ASSESSMENT METHODS
Evaluation on a semester basis (grade associated to 3 ECTS). Fall semester evaluation is about knowledge acquisition and the elaboration of a project plan. Spring semester evaluation is about the realization of the project. More information is given at the beginning of the academic year.

Demo: transversal competences (30")

The screenshot displays the IS-Academia web portal interface. At the top, there is a navigation bar with the EPFL logo, the text "IS-ACADEMIA OUTIL DE GESTION ACADEMIQUE", and language options (Français, English). Below this is a menu with tabs for Teaching, Exams, Timetable, Master Project, Projets, and Course book. The main content area is divided into several sections:

- My Courses:** A table listing courses for the 2013-2014 period. The table has columns for Code, Wordling, Lecturer state, and Section state. Two courses are listed: HUM-432(a) How people learn I and HUM-432(b) How people learn II.
- Course Book:** A detailed view of a course with sections for:
 - Keywords:** Learning, Education, Social and Human Research, Interdisciplinary Studies
 - LEARNING PREREQUISITES:** Required courses (obligatory) and Required courses (recommended).
 - Important concepts to start the course:**
 - LEARNING OUTCOMES:** Analyze real-life learning situations in terms of psychological and social factors Design.
 - Transversal skills:** A table with five empty rows.
 - TEACHING METHODS:** First semester: lecture course-seminar; Second semester: research project.
 - EXPECTED STUDENT ACTIVITIES:**
 - ASSESSMENT METHODS:** Evaluation on a semester basis (grade associated to 3 ECTS). Fall semester evaluation is about knowledge acquisition and the elaboration of a project plan. Spring semester evaluation is about the realization of the project. More information is given at the beginning of the academic year.
 - SUPERVISION:** Office hours, Assistants, Forum, Others.
 - RESSOURCES:** Bibliography, Notes/Handbook, Websites.
- Right Sidebar:** Contains a "List of verbs with cognitive level" section with three categories:
 - Higher:** Advise, Argue, Assess / Evaluate, Choose [an appropriate method], Compare, Construct, Contextualize, Coordinate, Create, Critique, Decide, Defend, Design, Develop [a rule, model or system], Elaborate, Estimate, Expound, Formalize, Formulate, Generalize, Hypothesize, Infer, Integrate, Interpret, Judge, Justify, Manage, Optimize, Plan, Produce, Promote, Propose, Sketch, Specify [a role, a function], Structure, Synthesize, Systematize, Theorize, Transpose.
 - Mid-range:** Analyze, Anticipate, Apply, Assemble, Carry out, Categorize, Characterize, Check [against criteria], Compare, Compute, Conduct [a study, an experiment], Contrast, Deduce, Demonstrate, Denive, Detect, Differentiate, Dimension, Discriminate, Distinguish, Examine, Exploit, Explore, Implement, Investigate, Make, Manipulate, Model, Modify, Operate, Organize, Perform, Predict, Realize, Report, Search, Solve, Test, Transcribe, Translate, Use, Verify, Visualize, Work out.
 - Lower:** Arrange, Classify, Complete, Define, Describe, Discuss, Draw, Establish, Explain, Express, Give an example, Identify, Illustrate, Label, Link, List, Match, Order, Present, Quote, Recall, Recognize.

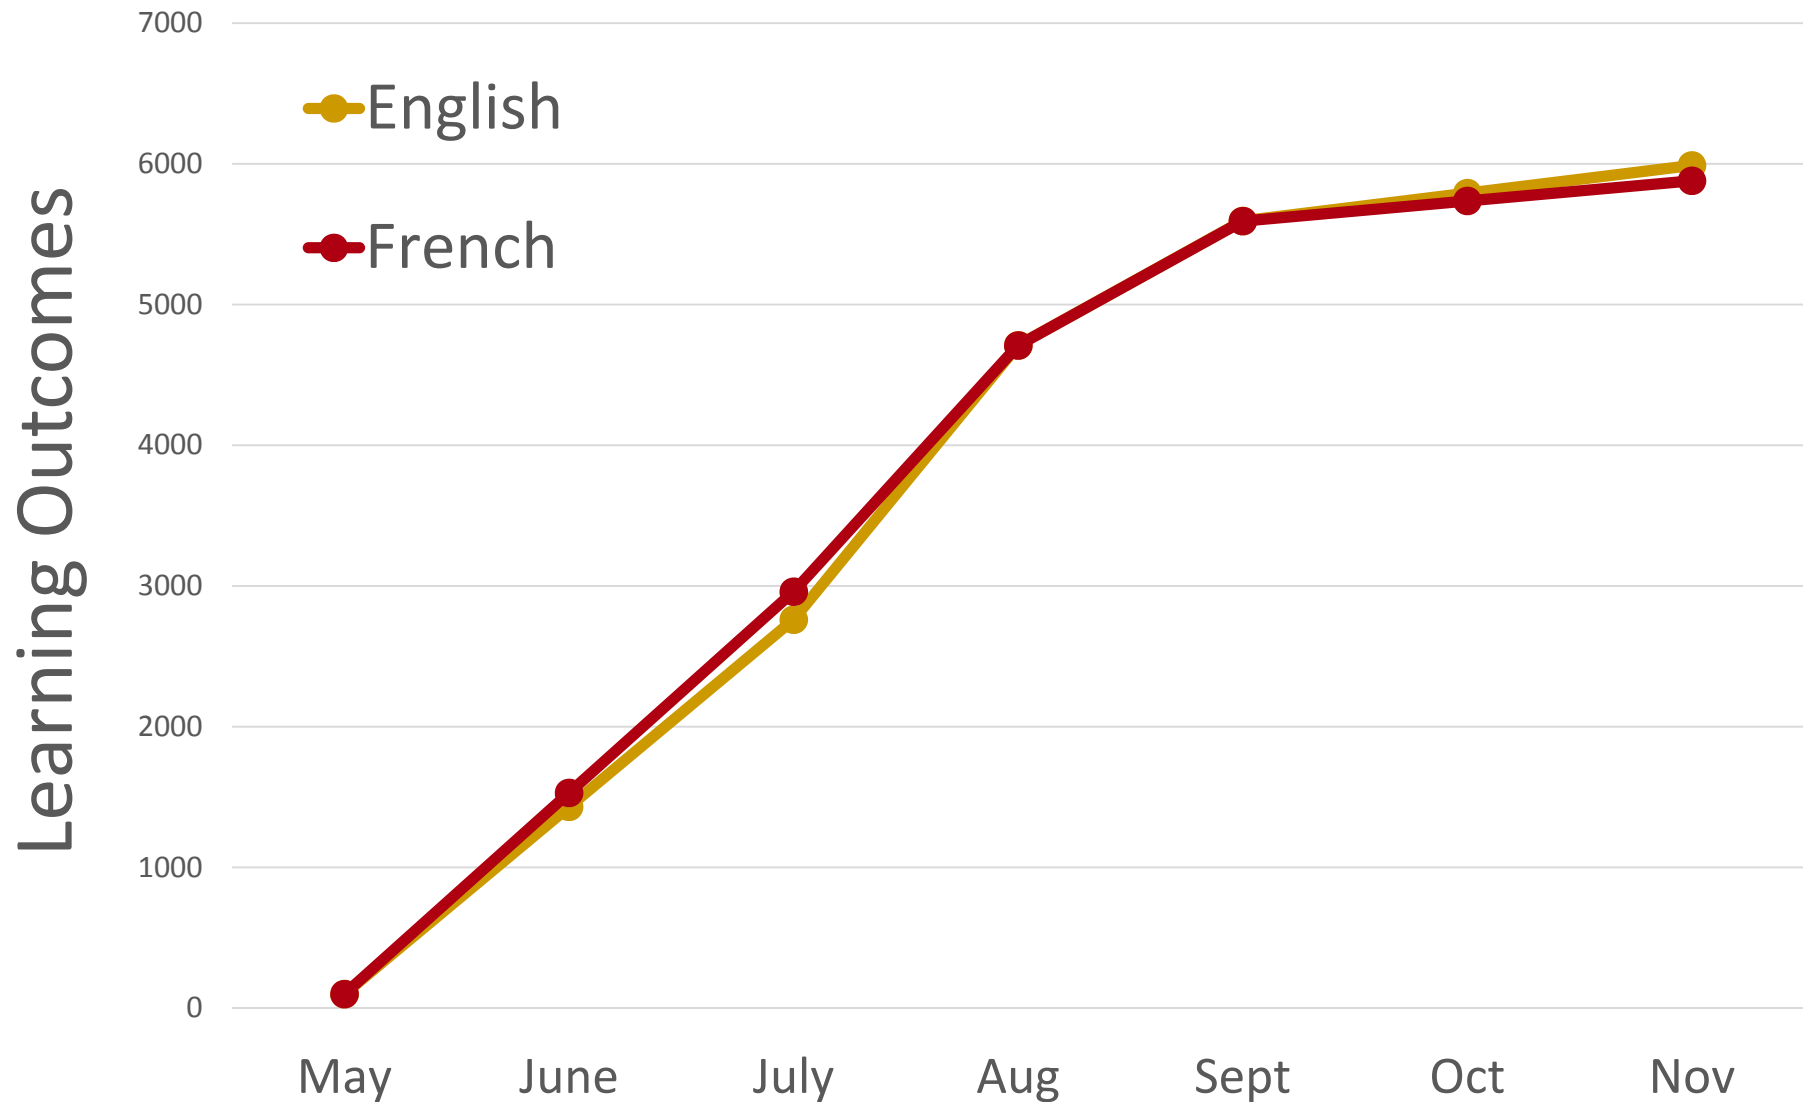

Resources & Support

- Information website
 - Advice, checklist and FAQ on **LO**
 - Screencast tutorial and FAQ on the **interface**
- ABC on LO ('How To' guide)
- Trainings
- Hotline

Some interesting results

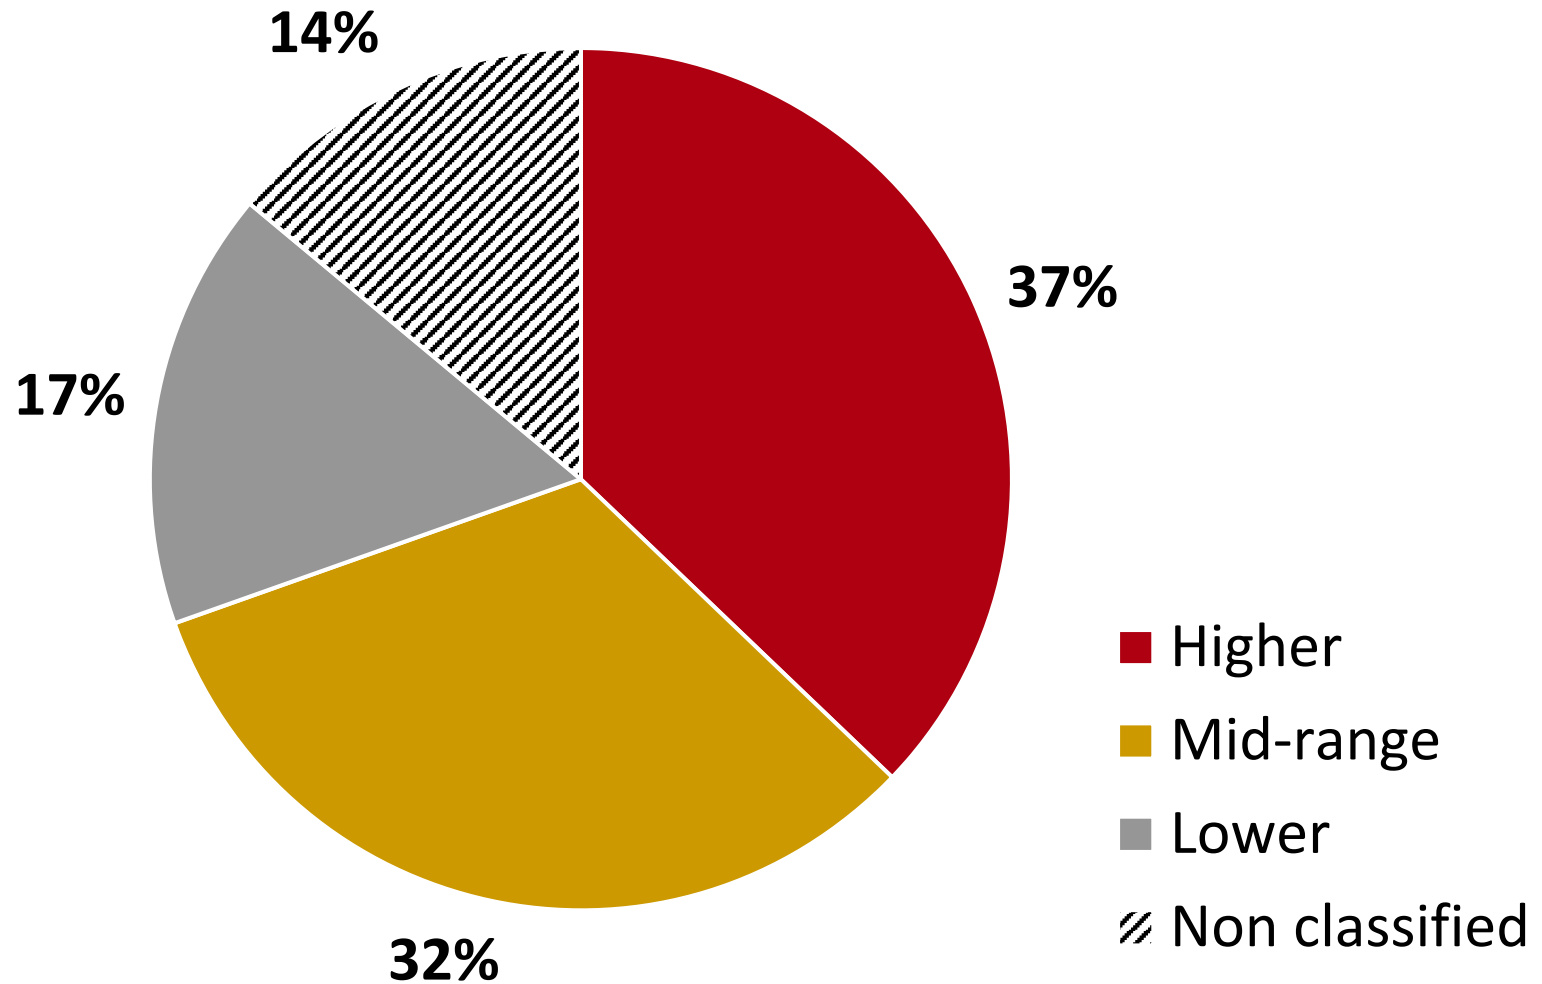

1. Interesting **discussions** with teachers on learning
2. High **number of courses** are now described with learning outcomes
3. A wide range of **subject competences** are represented at all **three cognitive levels**
4. **Transversal skills** shown to be present not only in specific type courses, but **across the curriculum**

“Quantity” of Learning Outcomes 2013

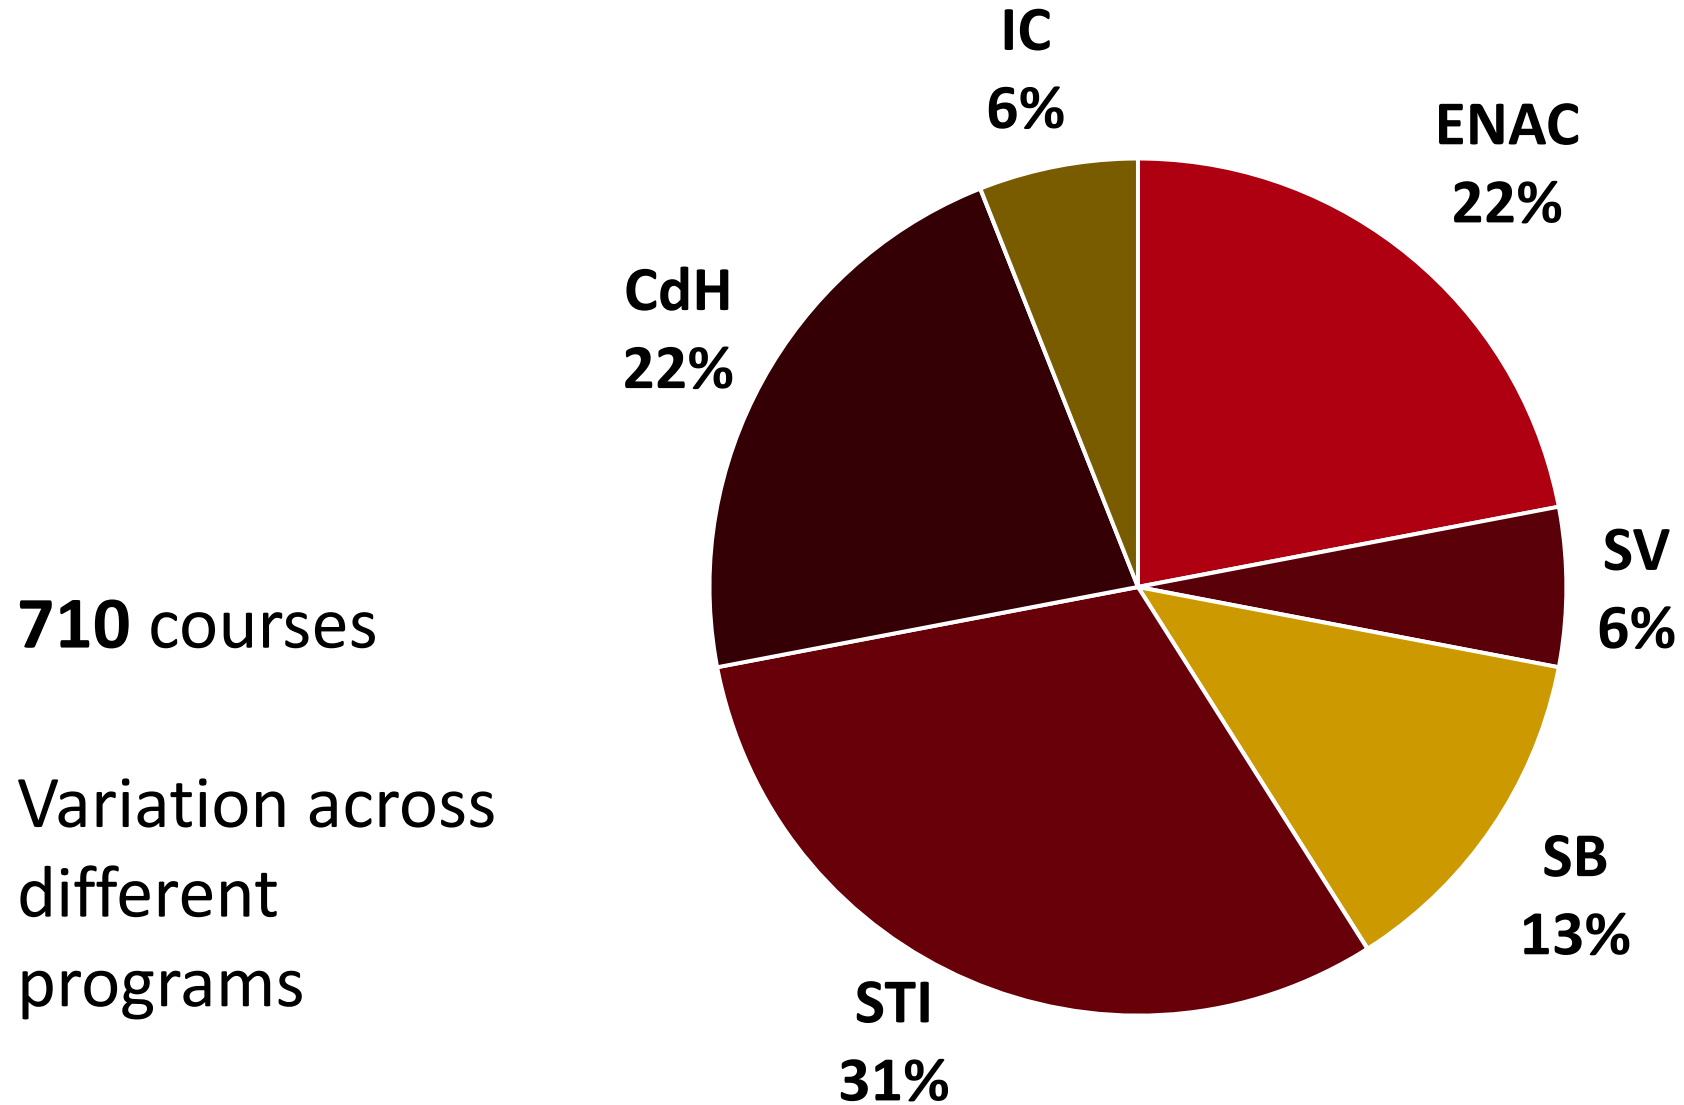

Level of cognitive skills represented

% of learning outcomes (English)

47% of courses include Transversal LO

Activity 2: Transfer

1. Write down a response to one or several of these questions (3 min).
 - a. What would help **teachers** define the workload starting from LO?
 - b. What effect would it make for **students** to have LO and SW formally written and in advance?
 - c. In terms of **programme management**, what suggestions for change can be made?

2. Plenum: let's share answers (10 min)

Conclusion

- EPFL's **interface sparked reflection** on LO and SW, while achieving a major administrative goal
- Results show teachers' **awareness to transversal skills** in scientific as well as social science courses
- Drafting a course description in terms of LO helps to **make SW visible**
- Defining what students shall be able to do promotes **coherence** between instructional strategy, LO and SW (alignment)

SUMMARY

The students will understand the range of factors that contribute to adult learning (different abilities, approaches to learning, social contexts and interaction with teachers, motivation and emotion). Students will be able to design a piece of educational research.

CONTENT

Social and Cognitive Factors in Adult Learning

General Aim: To enable participants to understand the learning processes of those of post-school age.

General Description of Material: The ability for individuals and organisations to learn is often regarded as central to their survival and success in the contemporary world. But how do people learn and what are differences in the ways they learn? Learning is partially a psychological concept, but understanding learning also draws on sociology and on the philosophical exploration of what we mean by knowledge (epistemology). Therefore understanding learning will involve a multi-disciplinary approach in order to understand what is happening when people are learning.

Plan of the course: Through exploring a number of types of studies on different aspects of learning, participants will build an understanding of some different research approaches which are used in studying learning. Students will also participate in studies and experiments to give them concrete experiences both of research approaches and of adult learning in practice.

Keywords

Learning, Education, Social and Behavioural Science Research, Interdisciplinary Studies

LEARNING OUTCOMES

By the end of the course, the student must be able to:

- Define the concept of learning, highlighting a range of definitions and their implications for the study of learning
- Describe the way in which information is processed and memories formed in humans, referring to Attention, Working Memory, Long Term Memory and related concepts
- Describe the role of individual differences (Intelligences, Personality, Approaches to Learning) in accounting for learning
- Describe the role of motivation, emotion and emotional self-regulation in relation to learning
- Describe the role of micro-social factors (interaction with teachers, peers and others) in accounting for learning
- Identify examples of how macro social factors (social class, policy and institutional factors etc.) impact upon the learning of different social groups
- Apply this knowledge to understand real-life learning situations
- Apply research design principles to design a piece of survey or experimental research
- Integrate psychological and social perspectives in studying learning
- Design a survey or an experiment to study learning

Transversal skills

- Make an oral presentation.
- Communicate effectively with professionals from other disciplines.
- Assess one's own level of skill acquisition, and plan their on-going learning goals.
- Summarize an article or a technical report.

TEACHING METHODS

First semester: lectures; labs; discussion of readings

EXPECTED STUDENT ACTIVITIES

Attendance in lectures and participation in in-lecture discussions; Participation in research labs; Reading of assigned

materials and discussion of readings; Communicating in oral or electronic form

ASSESSMENT METHODS

20% presentation in one of a number of formats (in front of class, on video, electronically)

80% Exam

SUMMARY

This course is a practical introduction to classical measurement techniques in a physics laboratory. The aim is to familiarise the students with data acquisition, sensors, signal processing, vacuum and cryogenics.

CONTENT

I Unit systems and magnitude orders
 II Data acquisition and error analysis
 III Measurement devices
 IV Optical systems
 V Vacuum technology, cryogenics

Keywords

electrical circuits, sensors, automatic control, signal processing, analogic signals, digital signal, cryogenics, vacuum, labview

LEARNING PREREQUISITES

Important concepts to start the course

concept on electrical circuits, Ohm law, concepts of units, drawing a graph with appropriate scales (linear, logarithmic)
 concept of pressure, force, displacement

LEARNING OUTCOMES

By the end of the course, the student must be able to:

- Assemble a setup for measuring physical observables
- Sketch graphically the result of a measurement
- Use measurement devices
- Justify the advantage of an experimental setup
- Realize a measure chaine for a sensor
- Illustrate how a sensor works
- Make a calibration

Transversal skills

- Use a work methodology appropriate to the task.
- Evaluate one's own performance in the team, receive and respond appropriately to feedback.
- Identify the different roles that are involved in well-functioning teams and assume different roles, including leadership roles.
- Resolve conflicts in ways that are productive for the task and the people concerned.
- Take responsibility for health and safety of self and others in a working context.
- Collect data.
- Access and evaluate appropriate sources of information.
- Assess progress against the plan, and adapt the plan as appropriate.

TEACHING METHODS

Hands on tutorial classes in groups of 5-6 students working on a bench

EXPECTED STUDENT ACTIVITIES

make the planned experimental setup in the classroom and repeat at home so that the student will be able to reproduce

and explain the setup

ASSESSMENT METHODS

Oral exam with assembling of an experimental setup

SUMMARY

This course provides a deep understanding of traditional and modern big data management systems. It covers fundamental data management topics such as system architecture, data models, query processing and optimization, database design, storage organization, and transaction management.

CONTENT

This course allows the student to acquire a database specialist/administrator profile, while providing a deep understanding of the entire design of a data management system.

During this course, the students will learn about:

- The Entity-relationship and Relational Models
- Relational Algebra and Calculus
- The SQL Query Language
- Traditional and Modern Data Storage, File Organizations, and Indexing
- Hashing and Sorting
- Query Evaluation and Relational Operators
- Query Optimization
- Schema Refinement
- Transaction Management (Concurrency Control and Recovery)

Homework

Homeworks will be assigned to aid and assess comprehension of the above material. Homework will be either done using pen and paper or they will be programming exercises. During the semester the students will be asked to do a project to gain experience on how to build a database application, and to apply what they learn in class.

Keywords

databases, database design, data modeling, normalization, database management systems (DBMS), files, indexes, storage, external sorting, queries, query evaluation, query optimization, transactions, concurrency, recovery, SQL

LEARNING PREREQUISITES

Required courses

Data structures

Recommended courses

For the practical part of the course (project) the following skills will be needed:

- System oriented programming, with focus on scripting languages to enhance the parsing process of raw data.
- Building user interfaces, either web (e.g., PHP, JSP, ASP, ...) or application GUI (e.g., java).

Important concepts to start the course

Before the beginning of the course students must be familiar with:

- Data structures
- Algorithms concepts

LEARNING OUTCOMES

By the end of the course, the student must be able to:

- Express application information requirements
- Use a relational DBMS
- Create a database on a relational DBMS
- Design a database with a practical application in mind

- Model the data of an application using ER and relational modeling
- Explore how a DBMS performs its work
- Report performance and possible optimizations for applications using DBMS
- Justify design and implementation choices

Transversal skills

- Assess progress against the plan, and adapt the plan as appropriate.
- Evaluate one's own performance in the team, receive and respond appropriately to feedback.
- Write a scientific or technical report.
- Make an oral presentation.

TEACHING METHODS

Ex cathedra; including exercises in class, practice with pen and paper or with a computer, and a project

EXPECTED STUDENT ACTIVITIES

During the semester, the students are expected to:

- attend the lectures in order to ask questions and interact with the professor,
- attend the exercises session to solve and discuss exercises about the recently taught material,
- work on a project during the semester which covers the practical side of building an application using a database system,
- take a midterm
- take a final exam
