</thead>
</table>
| EP-1         | An application by the Consortium of Swiss Academic Libraries to purchase national licenses for selected publications. The application:  
|              | a) explains the planned selection criteria  
|              | b) is based on the DFG’s funding criteria  
|              | c) takes into consideration the changes to the Consortium’s organization as a result of its new task  
|              | Given the national importance of this proposal, SUC P-2 will consider contributions to current content licences as matching funds. The program assumes that the Consortium will support negotiations for open-access options for the current licenses. |
| EP-2         | Setting up a study to monitor the publication behavior of researchers in Switzerland. |
| EP-4         | Cooperation projects to improve communication about publishing terms and conditions and authors’ rights. |
| EP-6         | Projects to improve the interoperability of repositories and digitization platforms. |
| EP-8         | Participation in the SNSF’s or the universities’ gold OA applications: Contributions to publishing costs, memberships of OA publishing houses, participation in disciplinary OA consortia. |
| EP-9         | Converting publications owned by universities, scientific societies etc. to an open access model. |
| EP-10        | Digitizing content of national relevance on an existing digitization platform that is open to participants (retro-seals, e-manuscripta, e-rara, Scriptorium, rero.doc etc.). The operators of the digitization platforms offer their services at full cost on the basis of a service level agreement (SLA). |
| EP-12        | Cooperative projects for authority files and for improvements in the quality of standardized metadata. |
| WE-2         | Specifying and implementing a search solution for scientific publications and research data with a metadata hub and search engine, preferably as an extension to an existing solution. (Includes EP-11 and DM-6) |
National strategy
“Combining Efforts to Manage Scientific Information”

(D / F / E / I)
Four key areas of focus

Publications

eScience

Basis

Services

Services
Key area of focus 1: Publications

Extending licenses and supporting digitization and open access to create a basic range of online scientific publications.

- National licenses (publishers’ digital archives, “backfiles”)
- Improving the shared use of open access servers and digitization platforms by various organizations
- Incentives for open access publication models
- Digitizing content of national significance
- Improving the accessibility of publications and making them easier to find
Consistent processes for accessing research data and standards for processing and archiving are to be established across institutional boundaries.

- Developing concepts as a prerequisite for national services, in particular for managing research data, providing metadata automatically and archiving (processes, interfaces, guidelines)
- Further developing established local services on the basis of the concepts
- Supporting pilot projects that use these services
- Supporting training; establishing a support body for issues relating to data management, cloud computing, and processing power issues
A technical and organizational basis is necessary to implement the program. Facilities such as cloud infrastructures and a service platform are required.

- Setting up a national account management system with interfaces to the universities’ user management systems (identity management)
- Setting up competence centers for copyright and data law and for supporting open access and open data
- Setting up a national computing and storage infrastructure that is flexible to use
- Developing a business model for using and charging for cloud-based services
- Developing a national organization and an operating model
- Setting up an online service platform that meets users’ needs
Key area of focus 4: Services

Existing local services such as repositories, publication platforms and eLearning tools are to be expanded to create national services.

- Opening up e-learning solutions, document servers, open access publishing platforms, etc. to other participants
- Covering the costs of new partners to join these collaborative applications
- Funding collaborative pilot projects in new areas of requirement
- Pilot projects that use the national cloud infrastructure
- Offering shared services via a national service platform

Outlook

Gabi Schneider
Establish a service market

“The P-2 program funds the development of national solutions in the area of digital scientific information. It aims to build up a **service network for the Swiss scientific community** that enables easy access to publications and data, and at the same time provides tools for processing and safeguarding them.”

(National Strategy, 1.2)

“The goal of the program – the joint use of national services that are offered in a decentralized fashion by universities and university-related institutions – requires **a change in attitude. The universities must be ready to participate in a new “market” as both providers and users.**”

(White Paper, 5.4)

Program SUC P-2 "Scientific information: access, processing and safeguarding"
Next steps

Program management:

- 8 December (steering committee):
  - Decision on applications of the 2\textsuperscript{nd} call for proposals
  - Retrodigitization (EP-10): decision on strategy adaptation
- Gap analysis
- Reach out!
- Next deadlines for proposals: 15 February, 9 August 2015
- Projects may run beyond 2016, according to content driven planning!
- Explore the options for the establishment of a national organization

Program development 2017-2020:

- Lobby for the continuation of the program
- Consolidate the roadmap for research infrastructures (SERI)
- Collaborate with other service providers
- Collaborate with funding agencies

Ongoing projects

Martin Walder
Overview

Implementation area: Publications / WE-2
Project management: Universitätsbibliothek Basel
Partners: URZ Basel, Schweizerische Nationalbibliothek, Bibliothèque de l'EPFL, KUB/CBU

swissbib is the metacatalog of the libraries of the Swiss universities, universities of applied sciences and research institutes. It provides a central gateway to scientific information.

Goals

Continuation and appropriate extension of the service:

- Extension of the data foundation (metadata hub)
- Setup of a scalable infrastructure to enable the transfer and provisioning of data as linked data
- Enhancement of the user interface and the search functionality (mobile users)
Overview

Implementation area: Publications / WE-2
Project management: HES-SO Haute école de de gestion de Genève
Partners: HTW Chur, Universitätsbibliothek Basel

Goals

Extension of the swissbib platform to a service for linked metadata
- Conversion of the swissbib data sets to Resource Description Framework (RDF) by considering normative data and existing Linked Open Data (LOD) nodes
- Provision of the new semantic structure with a web API
- Integration of linked open data in the search functionality of swissbib
- Goals: better interoperability and more flexible possibilities for reuse of data
Pilot-ORD@CH – Open Research Data

Overview
Implementation area: Publications / WE-2
Project management: FORS/itopia
Partners: DHLab Universität Basel, Scientific IT Services ETH Zürich, Swiss Institute of Bioinformatics (SIB)

Goals
Development and operation of a pilot platform to:
- Aggregate metadata in order to publish research data (pilot: social sciences, humanities, life sciences)
- Promote secondary analysis of research data
- Facilitate interdisciplinary approaches in research and teaching
- Simplify the publication of research data sets belonging to publications
- Ambition after 2016: Continuation of the platform and extension to a Swiss metadata hub for research data.
Overview
Implementation area: Publications
Project management: Université de Fribourg

e-codices is the virtual manuscript library of Switzerland. Its goal is to provide access to all medieval & selected early modern manuscripts of Switzerland.

Goals
Continuation and extension of the service
- Update of the backend and frontend of the web platform
- Continuous update and extension of the digital contents
- Establishment of a competence center for Swiss manuscripts and digital manuscript research
- Further enhancements to improve the usability of the service
Overview
Implementation area: Basis / IM-1
Project management: SWITCH
Partners: Collaboration with advisory boards and working groups representing universities and libraries

Goals
Extension of SWITCH/AAI Identity Management (IdM)
- Development of a user-centric IdM, independent of the organizational affiliation
- Onboarding decentralized attribute authorities of universities and libraries
- Establish a unique, long-lasting digital identity, also outside the academic field
- Enable the interlinking with other identities (e.g. ORCID)
Overview
Implementation area:  Basis / CC-1
Project management:  SWITCH
Partners:  Collaboration with advisory boards of the universities

Goals
Establishment of the “Swiss academic cloud” for IT services
- Development and operation of virtual machines
- Development and operation of storage systems
- Monitoring, reporting and charging of these infrastructure services
- Provision and operation of “academic software”
- Training for users

This service addresses small and medium sized institutions (the “long tail”)
Data Life-Cycle Management

**Overview**

Implementation area: eScience / DM-1  
Project management: UniGE  
Partners: EPFL, ETHZ, HES-SO GE, SWITCH, Unibas, UZH  
Status: Initializing pre-project

**Goals**

- Concepts for management of research data over the entire lifecycle  
- Enable proper storage, safeguarding and secondary use of research data  
- Establish a common set of rules and best-practices in Switzerland  
- Support the researches to adequately handle data
Kooperative Speicherbibliothek

Overview
Implementation area: Services
Association: Zentral- und Hochschulbibliothek Luzern, Zentralbibliothek Zürich, Universitätsbibliothek Basel, Hauptbibliothek Universität Zürich, Kantonsbibliothek Aargau, Zentralbibliothek Solothurn

Kooperative Speicherbibliothek is a project to establish a service to store and manage books, magazines and other physical media, by considering (cost-) efficiency, space-saving aspects and appropriate conservation.

Goals
- Establishment of the organizational structures (inc. company and association)
- Planning, tendering and implementation / construction of the new library building
- Detailing of the operational setup
- Preparation of the books, magazines and other media
